

GIMDES Halal and Tayyib Workshops Program
24- 25 October 2015, Istanbul, Turkey

Dr. Halim Aydın
Musiad Excutive committte
GİMDES Vice president

Halal Status of Transgenic Food

Abstract: “And when he turns away (from you O Muhammad), his effort in the land is to make mischief therein and to destroy the crops and the cattle, and Allah likes not mischief.” Bakara 205
In organic agriculture, seed and embryo source can not be prompted, it is sufficient to know that the fertilizer is organic, regardless or whether the source is pigs or chicken, as long as the fertilizer’s chemical hygiene has been examined. Halal-Haram criteria, provides a safety filter that is more advanced than the era’s most advanced organic farming process and food safety system, known as HACCP.

The production of transgenic seed or embryo, is not a natural production, rather, it can be regarded entirely as a kind of technological production. The most critical products in terms of biotechnology are soybeans and corn.
